• Reference Documents. Year 2023	103
– WHO Resolution WHA77.4 Increasing availability, ethical access and oversight of transplantation of human cells, tissues and organs	104
– SANTANDER STATEMENT. Towards Global Convergence in Transplantation: Sufficiency, Transparency & Oversight	108

FOR THE PURPOSES OF THIS NEWSLETTER THE FOLLOWING DEFINITIONS WERE USED:

ACTUAL DECEASED ORGAN DONOR

A deceased person from whom at least one organ was recovered for the purpose of transplantation.

DONOR AFTER THE NEUROLOGICAL DETERMINATION OF DEATH

A donor after brain death (DNDD) is a deceased organ donor in whom death has been determined by neurologic criteria.

DONOR AFTER THE CIRCULATORY DETERMINATION OF DEATH

A donor after circulatory death (DCDD) is a deceased organ donor in whom death has been determined by circulatory and respiratory criteria.

Modified Maastricht Categories (Paris 2012) of DCD:

II/ Witnessed cardiac arrest (uncontrolled): Sudden unexpected irreversible cardiac arrest, with unsuccessful attempt at resuscitation by a medical team.

III/ Withdrawal of life-sustaining therapy (controlled DCD): Planned withdrawal of life-sustaining therapy with an expected cardiac arrest.

IV/ Cardiac arrest while brain dead (uncontrolled or controlled): Sudden or planned cardiac arrest after brain death diagnosis, but before organ recovery.

V/ Medical assistance in dying: Medically assisted cardiac arrest

UTILISED DECEASED ORGAN DONOR

An actual donor from whom at least one organ was transplanted.

ORGAN TRANSPLANTS

The transfer (engraftment) of human organs from a donor to a recipient with the aim of restoring function(s) in the body.

TOTAL TRANSPLANTS (ALL COMBINATIONS INCLUDED)

Includes the transplantation of the corresponding organ with or without the simultaneous transplant of a different type of organ(s).

DOUBLE-KIDNEY TX.

One double-kidney TX. is counted as 1 TX.

TX. FROM LIVING DONORS

A living donor is a living human being from whom organs have been recovered for the purpose of transplantation. A living donor has one of the following three possible relationships with the recipient:

A – Related: The donor is genetically and/or emotionally related to the recipient.

A1/ genetically related: A genetic relation exists between donor and recipient (e.g. brother/sister, parent/offspring). Therefore a certain immunological compatibility exists too.

A2/ emotionally related: The donor is a genetically unrelated family member (e.g. spouse) of the recipient or a friend (to be considered as a family member).

B – Unrelated: The donor has no genetic or emotional relationship with the recipient. The relation between donor and recipient must be outlined further by a sub-specification. Immunological compatibility exists only by chance.

B1/ paired exchange or cross-over: By a controlled programme, unrelated donor and recipient pairs exchange grafts beyond any emotional or genetic relation, with the aim of overcoming immunological restrictions.

B2/ non-directed altruistic or anonymous: By a controlled programme, the donor can provide a graft to society which allocates this to a previously unknown recipient by defined rules.

B3/ directed altruistic: By a controlled programme, the donor provides a graft to a recipient of the donor's choice.

DOMINO DONOR

Patient who undergoes organ transplantation from a deceased donor and whose organ is suitable for transplant to another transplant candidate.

DOMINO TRANSPLANT

A procedure in which an organ is removed from one transplant candidate and immediately transplanted into a second patient, with the first patient receiving a new organ from a deceased donor.

HEART-LUNG TX.

One heart-lung TX. is counted as 1 lung TX., 1 heart TX. and 1 heart-lung TX.

DOUBLE-LUNG TX.

One double-lung TX. is counted as 1 TX.

TOTAL NUMBER OF PATIENTS TRANSPLANTED

For more than one organ transplanted into the same recipient: kidney-liver-heart TX. = counted as one recipient.

PAEDIATRIC

Includes only paediatric activity (patients aged < 18 years).

WAITING LIST

Example: At 1/1/2023 there were 200 patients active on the waiting list (WL). Along the year, 100 patients are newly included on the WL (first row). In total, 300 patients have been ever active on the WL during the year (second row). Along the year, 200 patients received an organ transplant (number recorded in a different questionnaire), 50 patients remained active at the end of the year (third row), 25 patients died (fourth row) and 25 patients were excluded (number not to be reported, but derived from previous figures).

Patients included on the WL for the first time in the course of 2023	100
Total number of patients ever active on the WL during 2023	300
Patients awaiting for a transplant (only active candidates) on 31/12/2023	50
Patients who died while on the WL during 2023	25

FAMILY REFUSALS

Numbers of interviews to pose the option of organ donation: number of interviews to present families with the option of donating the organs of the deceased person (brain death or circulatory death).

Number of family refusals: number of negative responses to donate after holding interviews with the families.

Letter from the Editor

Letter from the Editor

Beatriz Domínguez-Gil, MD, PhD
Director Organización Nacional de Trasplantes, Spain
Editor of Newsletter Transplant

Dear friends,

It is with great pleasure that I introduce a new issue of the *Newsletter Transplant*, one of the most valuable activities of the European Committee on Organ Transplantation of the Council of Europe (CD-P-TO), produced in conjunction with the Spanish Organización Nacional de Trasplantes (ONT). Since 1996, this publication has allowed the CD-P-TO to share information on donation and transplantation activities, not only in member states of the Council of Europe, but also in a progressively increasing number of countries throughout the world. The *Newsletter Transplant* is also a tool that allows the CD-P-TO to inform on its activities.

Without doubt, monitoring of practices in the donation and transplantation of substances of human origin (SoHO) across countries is essential for the sake of transparency and international benchmarking. This is the main aim of the *Newsletter Transplant* and the reason it has become an international reference. In this new issue, the *Newsletter Transplant* provides data from 89 countries worldwide for the year 2023. An important conclusion from the data collected is that organ transplantation activities increased globally by 9% over 2022, an increase driven by an expansion of both deceased and living organ donation. Donation after the circulatory determination of death gained an extraordinary importance in the past year, since one out of four deceased donors in the world had been declared dead by circulatory criteria. However, organ transplant activities remained highly variable across countries, meaning that access to organ transplantation remains neither universal, nor equitable. Although waiting list data do not accurately represent the need for organs for clinical use, the number of patients waiting for a transplant and the number of deaths on the waiting list are a constant reminder of the importance of pursuing our work to expand transplant therapies. All this information, and more, is presented in this issue of the *Newsletter Transplant*. Let me take this opportunity to remind you that the

underlying data collection is also hosted by the *Global Observatory on Organ Donation and Transplantation* (<https://www.transplant-observatory.org>), developed and maintained by the ONT as collaborating center of the World Health Organization (WHO). The Observatory allows users to download the data, display figures and perform different types of analyses online.

As in previous editions, the *Newsletter Transplant* is not limited to presenting data in the organ field, but also includes data collected via the Eurocet platform by the Centro Nazionale Trapianti (CNT) in Italy on the donation, procurement, processing, distribution and clinical use of tissues and cells from a significant number of countries. This type of data collection should be gaining more prominence, something that I underscore following the official adoption of the Regulation on Substances of Human Origin (SoHO) by the European Union (EU) Parliament and the Council and its publication in May 2024 (<https://data.consilium.europa.eu/doc/document/PE-8-2024-INIT/en/pdf>). This Regulation will determine the future of activities in the SoHO field not only in EU Member States, but also in neighbouring countries. It is important to highlight that the Regulation recognises the Council of Europe guides on the quality and safety of blood, and tissues and cells, as technical references, hence acknowledging the value of this work performed under the auspices of the CD-P-TO.

Through a number of initiatives, programmes and legal instruments, the CD-P-TO has indeed contributed to the development and implementation of quality and safety standards in the field of donation and transplantation. It has also facilitated the exchange of knowledge between countries and institutions, secured fundamental rights and ensured respect for the human body. In addition, over the years, the CD-P-TO has identified topics of interest and elaborated a set of resolutions and recommendations that have been subsequently adopted by the Committee of Ministers of the Council of Europe. These documents have profoundly impacted national legislations, ethical

frameworks, strategic plans on organisational aspects of donation and transplantation, and professional practices, supporting countries in addressing the many challenges posed by transplantation in a uniform manner. This is an ideal opportunity to remind you all that the fruit of this intense work is available on the website of the European Directorate for the Quality of Medicines & Healthcare (EDQM) of the Council of Europe: <https://www.edqm.eu/en/organs-tissues-and-cells>.

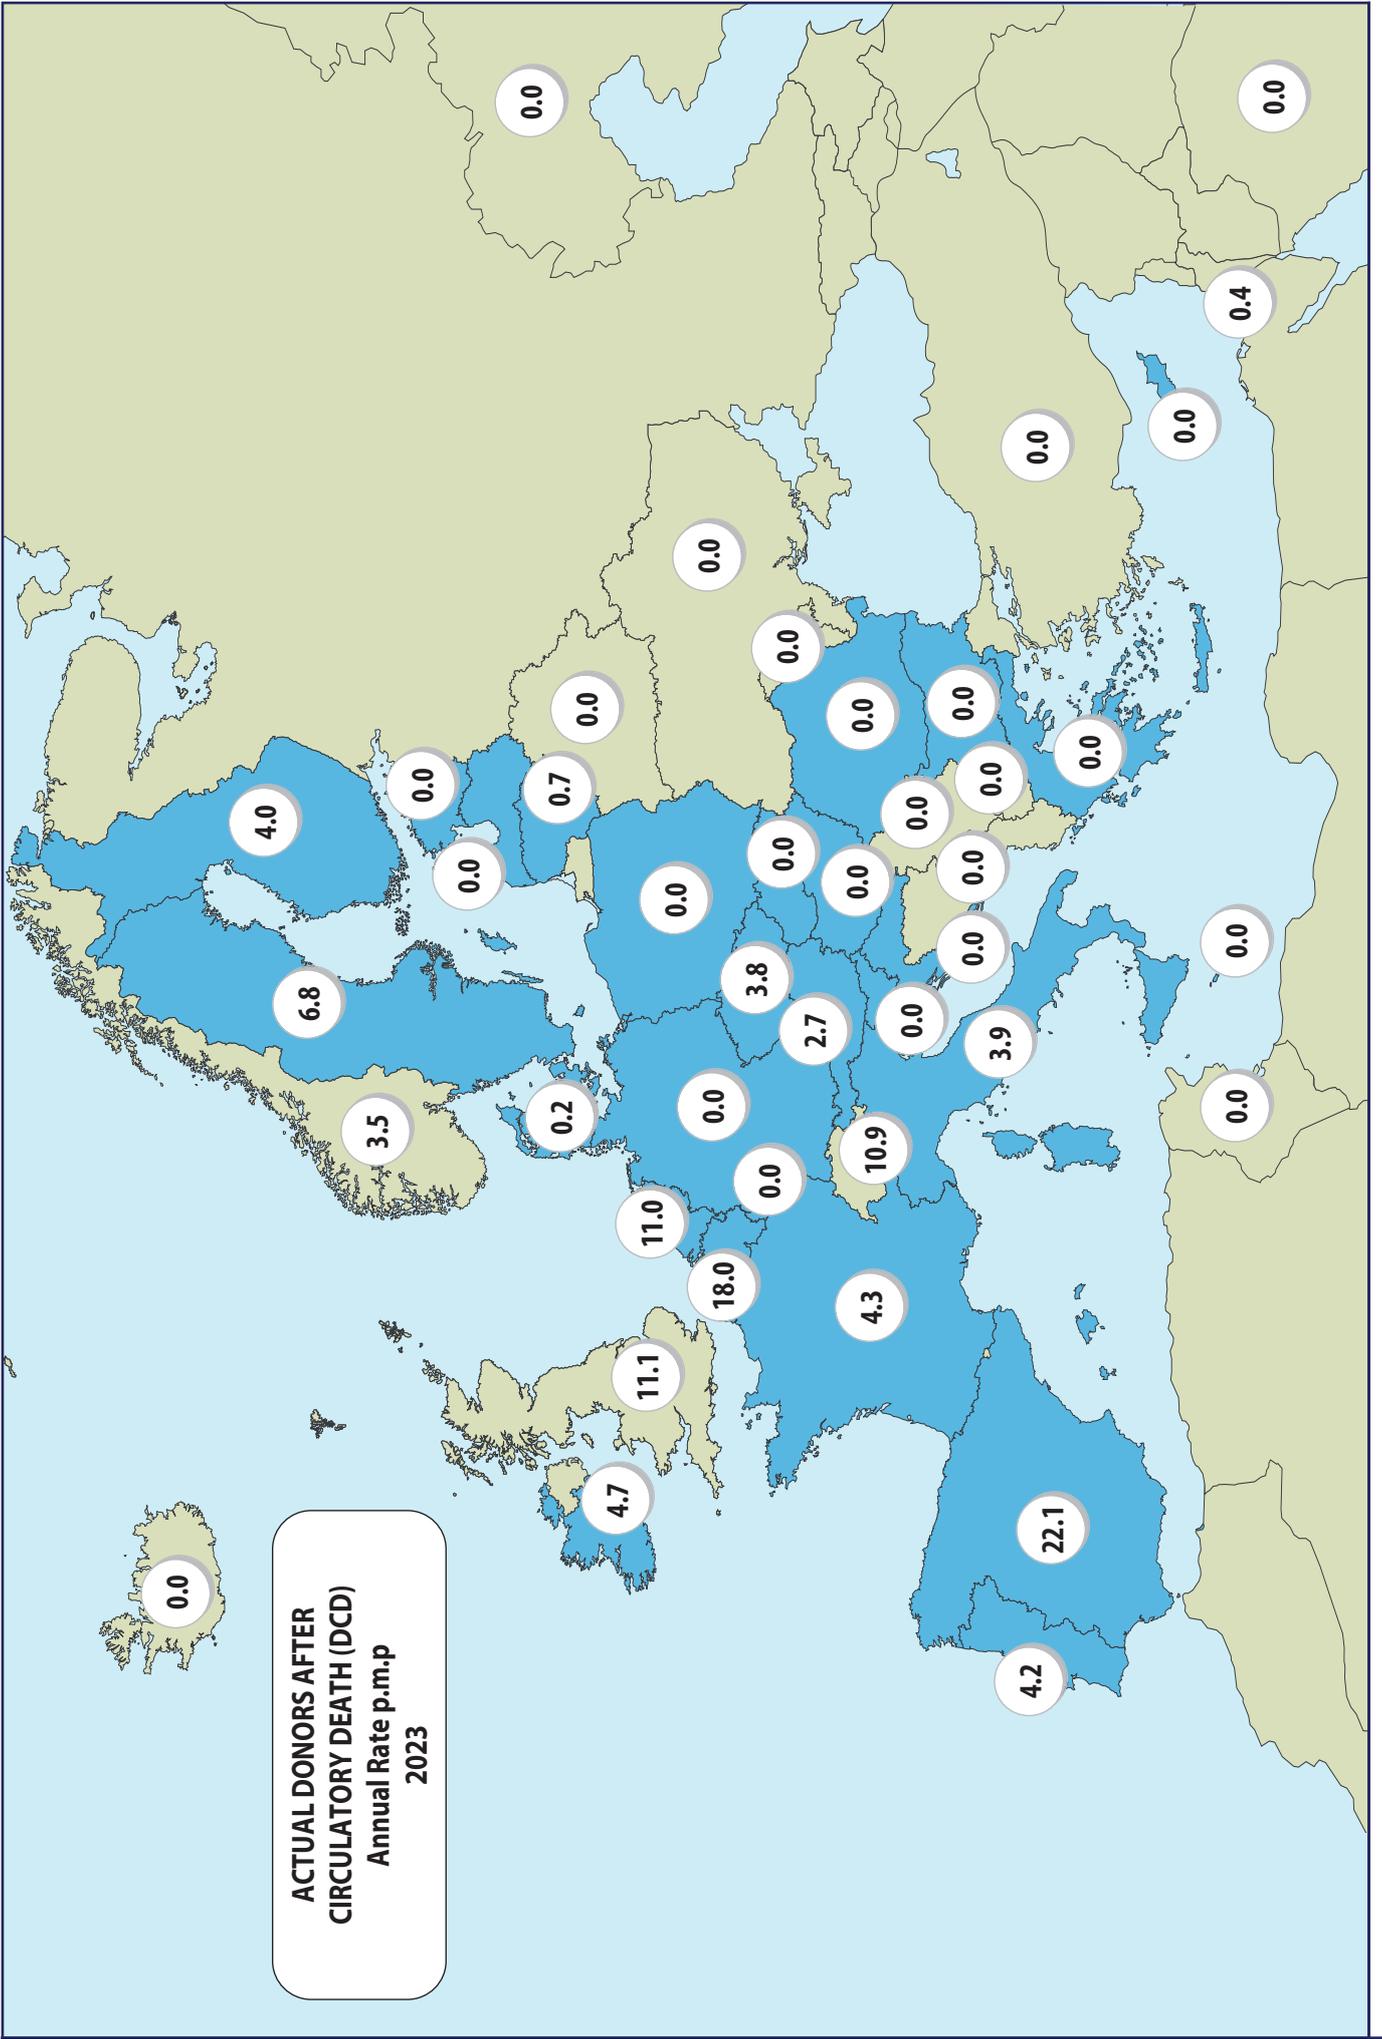

This edition of the *Newsletter Transplant* presents two important documents that emerge from the need to address current challenges in the field on a global scale and that lay out a roadmap for transplantation for the near future. Firstly, we present the Santander Statement, the main result of the Global Summit entitled *Towards Global Convergence in Transplantation: Sufficiency, Transparency and Oversight* that was convened by the ONT under the 2023 Spanish Presidency of the Council of the EU and that took place in the beautiful city of Santander in the north of Spain in November 2023. The event was co-organised by the EDQM, the European Society for Organ Transplantation (ESOT), and The Transplantation Society (TTS), was co-sponsored by WHO and was supported by the International Society of Nephrology (ISN). The Santander Statement, endorsed by the CD-P-TO, provides high-level recommendations aimed at improving patient care, making progress towards sufficiency in transplantation, ensuring transparency

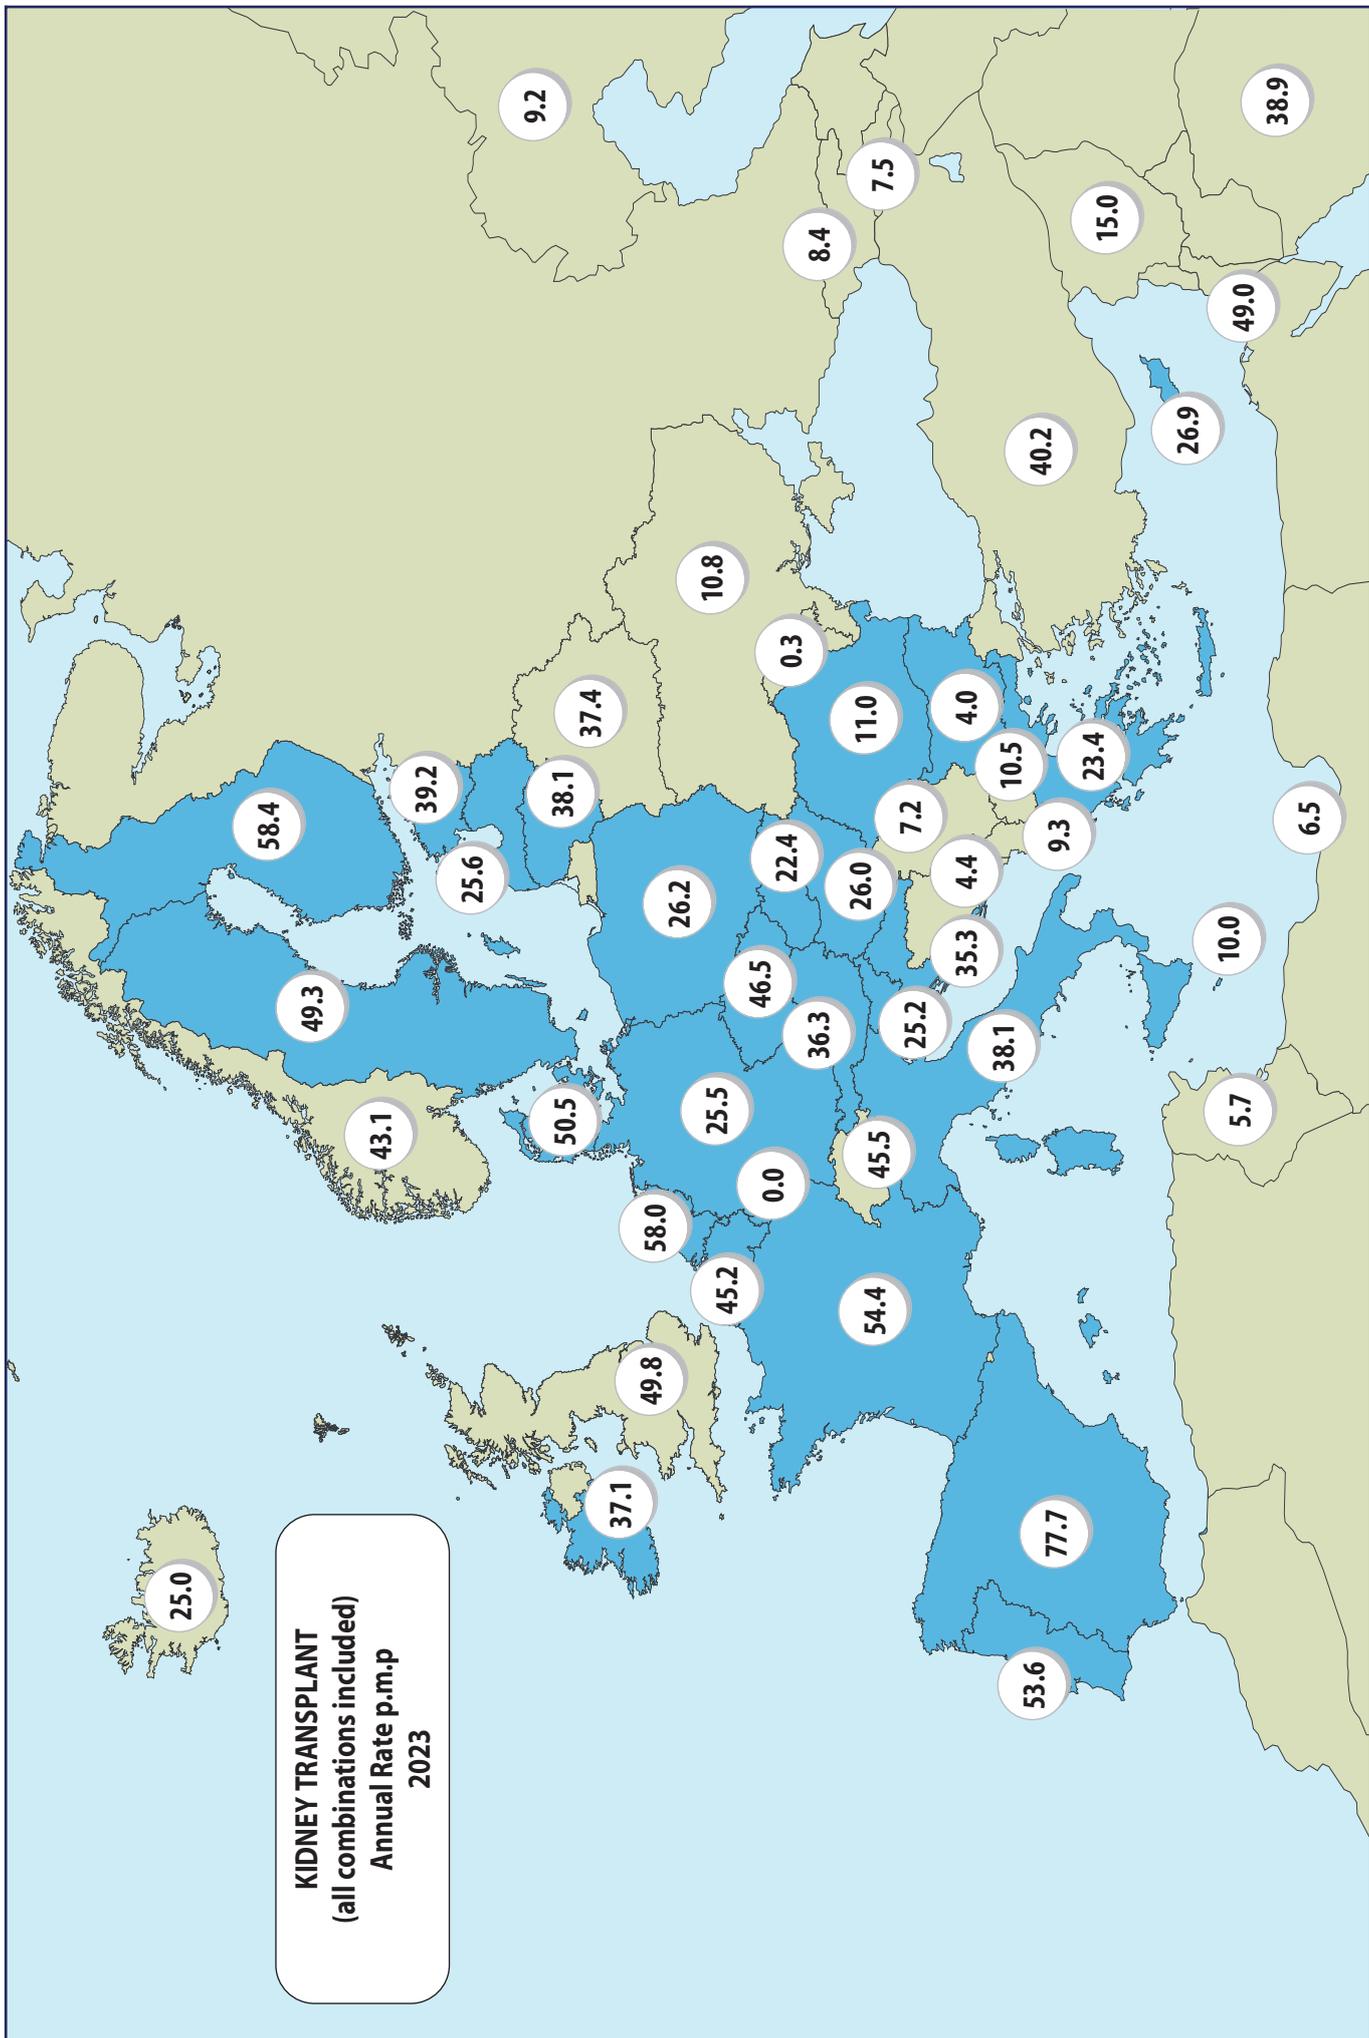

and oversight of practices, strengthening the prevention of human trafficking for the removal of SoHO and trafficking in SoHO, and fostering responsible innovation in the clinical use of SoHO. Secondly, we present World Health Assembly (WHA) Resolution 77.4 on increasing availability, ethical access, and oversight of transplantation of human cells, tissues, and organs, approved on 29 May 2024. The drafting of the resolution was led by Spain, who used the background provided by the Global Summit and the Santander Statement. The draft resolution was later subject to consultation with Member States and formally adopted during the 77th WHA. Resolution 77.4 urges Member States to take actions to face pressing challenges in the field and requests, among others, the WHO Secretariat to support countries through the development of a Global Strategy in Transplantation, expected to be presented at the 79th WHA in May 2026.

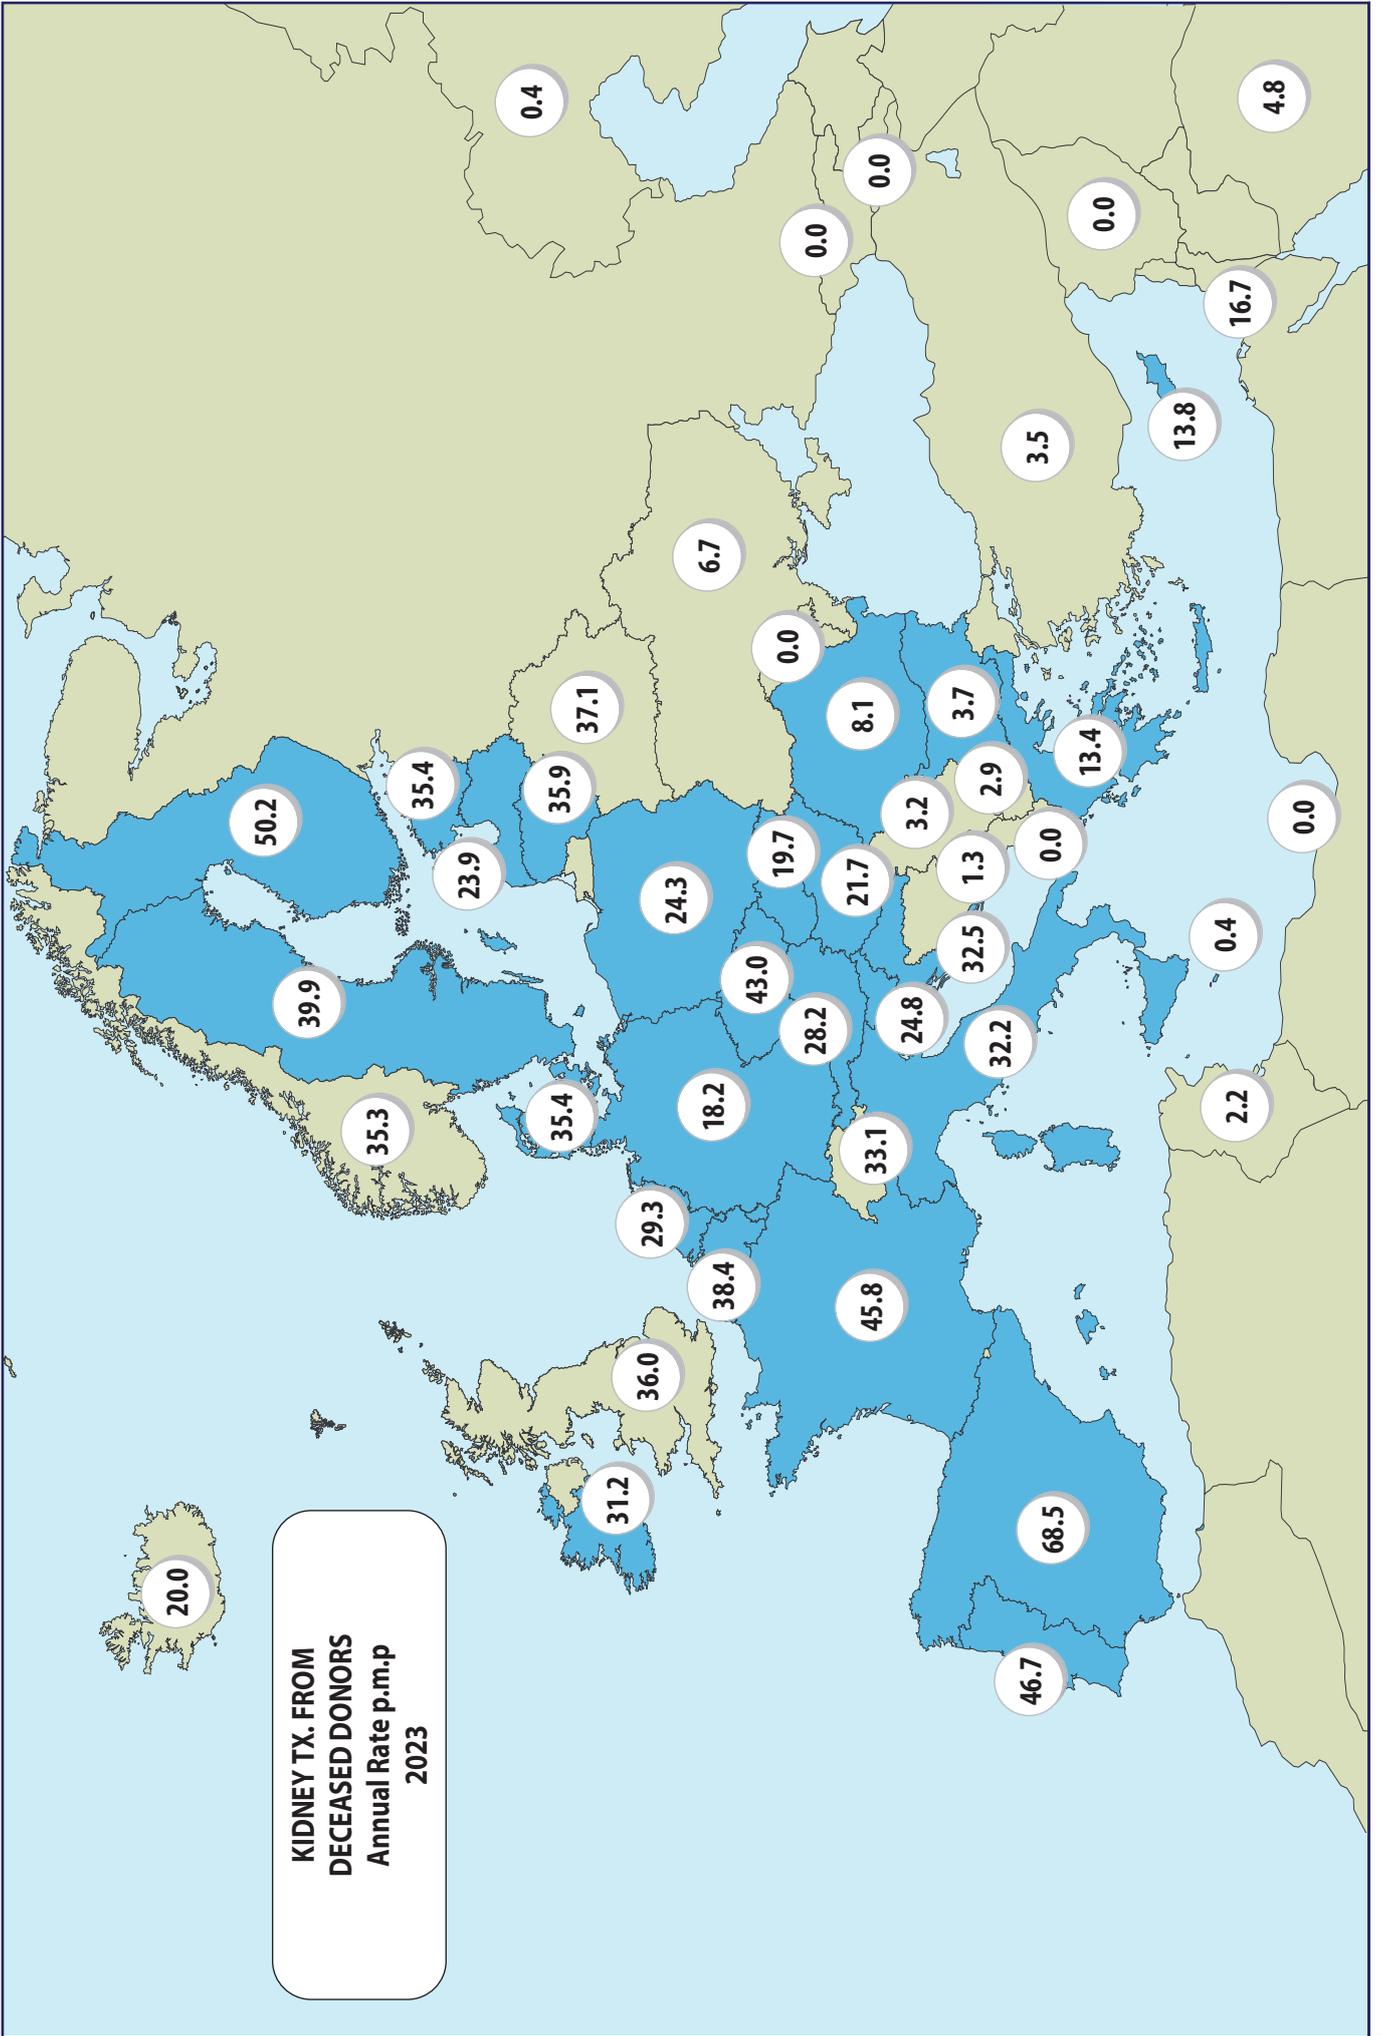

I would like to close this letter by thanking all those who make the *Newsletter Transplant* possible: the members of the CD-P-TO, the national focal points providing official data on a regular basis and the EDQM Secretariat. Let me also thank the members of the ONT devoted to this work, whose continuous commitment and enthusiasm are essential for an exercise that every year showcases the outcomes of the efforts undertaken in the fascinating field of transplantation.

Glossary (Tissues)

A

Adipose tissue: loose connective tissue, composed of adipocytes and stromal vascular fraction, which serves as energy storage and endocrine organ.

Amniotic membrane: the innermost layer of the placenta consisting of a thick basement membrane and an avascular stromal matrix.

Autologous: refers to tissues or cells removed from and applied in the same individual.

B

Blood vessels: part of the circulatory system that transport blood throughout the body. They include arteries (ducts transporting blood from the heart to the periphery) and veins (ducts transporting blood from the periphery to the heart).

C

Cornea: the transparent anterior part of the outer fibrous coat of the eye. A collagenous tissue bounded by an outer stratified epithelium and an inner monolayer of endothelial cells. The major refractive component of the eye.

Craniectomy: the surgical removal of a portion of the skull.

D

Distribution: the transportation and delivery of tissues and cells intended for human application to other tissue establishments or the organisation responsible for human application in the EU. It does not include the issuing of tissues and cells for immediate transplantation.

Donation: donating human tissues or cells intended for human applications. One donation may include more units of the same tissue.

E

Export: the transportation and delivery of tissues and cells intended for human application to tissue establishments or the organisation responsible for human application outside the EU (third country).

H

Heart valve: one of the four structures within the heart that prevent backflow of blood by opening and closing with each heartbeat. They include two semilunar valves (aortic and pulmonary), the mitral (or bicuspid) valve, and the tricuspid valve. They permit blood flow in only one direction.

I

Import: the act of bringing tissues or cells into a EU Member State from a country outside the EU (third country) for the purpose of human application, further processing or storage.

M

Musculoskeletal: tissues that are part of the skeleton and muscular system, including muscles, bones, cartilage, tendons and ligaments, which function in the support and movement of the body.

N

Number of tissues distributed: number of tissue transported and delivered for human application.

Number of tissues processed: number of tissues that were declared suitable for human application after having undergone the required operations (preparation, manipulation, preservation, storage and packaging).

Number of tissue procured: the number of donated tissue made available through the process of procurement.

Number of recipients for each type of tissues: the total number of patients who had at least one unit of tissues or cells applied during the year concerned in a given country.

O

Ocular tissue: tissue from the eye ball such as corneal tissue, scleral tissue or limbal tissue procured from a donor for human application.

Other tissue: all human tissues for human application that does not have a dedicated row on the form.

P

Pancreas: a large lobulated gland that in humans lies in front of the upper lumbar vertebrae

and behind the stomach and is somewhat hammer-shaped and firmly attached anteriorly to the curve of the duodenum with which it communicates through one or more pancreatic ducts.

Pancreatic islets: preparation of a group of heterogeneous cells containing functional insulin-producing cells (beta cells) and glucagon-producing cells (alpha cells) for human application.

Parathyroid: endocrine glands producing and secreting parathyroid hormone.

Placenta: an organ that connects the developing foetus to the uterine wall to allow nutrient uptake, waste elimination and gas exchange via the mother's blood supply.

R

Recipient: person to whom human tissues, cells or reproductive cells and embryos are applied.

Retrieval or procurement: a process by which tissues or cells are made available for banking or human application. This process includes donor identification, evaluation, obtaining

consent for donation, donor maintenance and retrieval of tissues, cells or organs.

S

Skin: an allograft comprising of the epidermis and part or all of the dermis.

T

Tissue: an aggregate of cells joined together by, for example, connective structures and performing a particular function.

Tissue donation (effective): when tissue intended for human application is retrieved from a human body.

Transplantation/implantation/grafting: transfer (engraftment) of human tissues or cells from a donor to a recipient with the aim of restoring function(s) in the body.

U

Unit: a single piece of tissue or a packaging containing a defined amount of tissue ready for distribution.

Glossary (Haematopoietic Progenitor Cells)

A

Allogeneic: refers to tissues or cells removed from one individual and applied to another of the same species.

Autologous use: refers to tissues or cells removed from and applied in the same individual.

B

Banking: processing, preservation, storage and distribution of cells for human application or other purposes, including research and training.

C

Collection: any procedure for procuring a cellular therapy product regardless of technique or source (Synonym: harvest).

Cord blood: blood collected from placental vessels and umbilical cord blood vessels after the umbilical cord is clamped and/or severed as a source of haematopoietic progenitor cells.

Cord blood bank: a specific type of tissue establishment in which haematopoietic progenitor cells collected from placental and umbilical cord blood vessels are processed, cryopreserved and stored. It may also be responsible for collection, testing or distribution.

D

Distribution: the transportation and delivery of tissues and cells intended for human application to other tissue establishments or the organisation responsible for human application in the EU. It does not include the issuing of tissues and cells for immediate transplantation.

Donation: donating human tissues or cells intended for human applications.

Donor: a person who is the source of cells or tissue for a cellular therapy product.

Donor registry: an organisation responsible for coordinating the search for hematopoietic cells from donors (including cord blood) unrelated to the potential recipient.

H

Haematopoietic progenitor cells (HPC): primitive haematopoietic cells capable of self-renewal as well as maturation into any of the haematopoietic lineages, including committed and lineage-restricted progenitor cells, unless otherwise specified and regardless of tissue source. Also referred to as 'haematopoietic stem cells.

R

Recipient: person to whom human tissues, cells or reproductive cells and embryos are applied.

Related: existence of a genetic relationship between donor and recipient.

S

Search: the process of identifying a suitable stem cell source for a patient in need of a transplant.

T

Transplantation: the administration of allogeneic, autologous, or syngeneic HPC with the intent of providing transient or permanent engraftment in support of therapy of disease.

U

Unrelated: where there exists no genetic relationship between donor and recipient.

WHO Resolution WHA77.4

Increasing availability, ethical access and oversight of transplantation of human cells, tissues and organs

SEVENTY-SEVENTH WORLD HEALTH ASSEMBLY. Agenda item 11.2

WHA77.4. 1 June 2024

The Seventy-seventh World Health Assembly,

Having considered the consolidated report by the Director-General;¹

Recalling resolutions WHA40.13 (1987) on development of guiding principles for human organ transplants, WHA42.5 (1989) on preventing the purchase and sale of human organs and WHA44.25 (1991) on human organ transplantation, WHA57.18 (2004) on human organ and tissue transplantation and WHA63.22 (2010) on human organ and tissue transplantation (updated WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation);²

Noting initiatives by the WHO regions in advancing the implementation of current resolutions on transplantation, including decisions taken by the WHO Regional Committee for the Americas³ and the WHO Regional Committee for Africa;⁴

Noting also the report by the Secretariat on principles on the donation and management of blood, blood components and other medical products of human origin, which promotes respect for human dignity, availability and safety, and good governance;⁵

Welcoming United Nations General Assembly resolution 77/236 (2022) on strengthening and promoting effective measures and international cooperation on organ donation and transplantation to prevent and combat trafficking in persons for the purpose of organ removal and trafficking in human organs;

Noting the Madrid resolution on organ donation and transplantation (2011),⁶ an outcome of the Third WHO Global Consultation on Organ Donation and Transplantation (2010) that provides recommendations for countries to progress towards meeting the transplant needs of patients;

Aware that transplantation is currently the preferred, if not the only, therapeutic alternative for patients with end-stage organ failure and that many other diseases benefit from the clinical application of human cells and tissues, and that such treatments depend on the altruistic donation of cells, tissues and organs;

Conscious that, despite the priority given by many Member States to prevention strategies, the burden of non communicable diseases treatable through transplantation continues to grow, as does the commensurate need for transplantation of human cells, tissues and organs;

¹ Document A77/4.

² In resolution WHA63.22, the Health Assembly endorsed the updated WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation. See document WHA63/2010/REC/1, resolution WHA63.22 and Annex 8.

³ See document CD57/11 and resolution CD57.R11 (2019).

⁴ See document AFR/RC70/12.

⁵ Document A70/19.

⁶ The Madrid resolution on organ donation and transplantation: national responsibility in meeting the needs of patients, guided by the WHO principles. Transplantation. 2011; 91: S29–S31. doi: 10.1097/01.tp.0000399131.74618.a5.

Mindful that facilitating access to transplantation of human cells, tissues and organs can reduce the premature mortality associated with non communicable and other diseases, improve the quality of life of thousands of patients throughout the world, and help communities to diminish the high costs of alternative treatment modalities;

Noting that expanded access to transplant therapies might contribute to the achievement of the United Nations Sustainable Development Goals, in particular, targets 3.4 (reduction of premature mortality from non communicable diseases) and 3.8 (access to universal health care);⁷

Aware that, despite the progress made over the past two decades, transplantation is not fully developed in all Member States, making access to these therapies neither universal nor equitable, a problem that impacts countries regardless of their level of development;⁸

Noting with concern that the pandemic of coronavirus disease (COVID-19) had a profound, negative effect on donation and transplantation activities,⁹ revealing the need to consider including transplant therapies in approaches designed to strengthen the resilience of health care systems;

Convinced that insufficient access to transplantation therapies is one of the root causes of trafficking in persons for the purpose of organ removal and trafficking in human organs, practices that undermine human rights and pose serious risks to public health;

Alarmed that armed conflicts, natural disasters and humanitarian emergencies are fuelling migration, particularly among disadvantaged populations and those in the most vulnerable situations, thereby increasing the risk of trafficking in persons for the purpose of organ removal and trafficking in human organs and exacerbating inequities in access to therapies based on human cells, tissues and organs;

Noting with concern the lack of full implementation of the WHO Guiding Principles on Human Cell, Tissue and

Organ Transplantation, particularly regarding transparent data reporting and health authority oversight of transplant practices;

Aware that technological innovations applicable to human cells, tissues and organs are increasingly enabling therapies that, given the unique origin of these novel treatments, require specific regulations with a particular focus on ethical considerations,¹⁰

1. URGES Member States, in accordance with their national contexts:
 - (1) to implement or strengthen existing preventive strategies targeted at reducing the burden of non communicable and other diseases treatable with transplantation;
 - (2) to integrate donation, transplantation and transplant follow-up activities into health care systems, so deceased donation is routinely considered as an option at the end of life and transplantation is incorporated in the continuum of care of patients with non communicable and other diseases or conditions that may benefit from this therapy, by pursuing policies that support universal health coverage and eliminate financial barriers to access quality, safe, effective, affordable and essential health services;¹¹
 - (3) to protect living donors by requiring informed consent and appropriate medical and psychosocial evaluation, as well as by providing proper follow-up care;
 - (4) to increase the availability of human cells, tissues and organs for transplantation with special attention to developing deceased donation to its maximum therapeutic potential, including donation after the neurological determination of death and, where appropriate, donation after the circulatory determination of death, and in line with the relevant WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation;

- (5) to establish, where appropriate, official international cooperation for the exchange of human cells, tissues and organs or transplant services, based on the principles of reciprocity and solidarity, as a means of facilitating universal access to transplantation therapies;
- (6) to develop and implement regulatory frameworks aligned with the WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation, in particular by encouraging donation as an altruistic, voluntary and non-remunerated act and by promoting equitable access to transplantation therapies;
- (7) to designate authorities and improve capacities to provide governance and implementation of donation and transplantation activities in their jurisdictions;
- (8) to ensure that donation and transplantation activities take place in centres specifically authorized, accredited or registered, and establish control measures, such as periodic or risk-based inspections and the collection and timely reporting of data on every donation and transplant procedure, including transplants carried out on residents in other jurisdictions;
- (9) to promote the safety and efficacy of transplantation by collecting data on the outcomes of recipients and living donors, conducting biovigilance and relevant surveillance, ensuring capacity to trace cells, tissues and organs from donor to recipient, and vice versa, and encouraging the use of globally consistent coding systems for human cells, tissues and organs;
- (10) to consider including donation and transplantation in national and regional preparedness plans designed to increase the resilience of health care systems and to facilitate an effective response to transplant needs in the event of crisis;
- (11) to take measures to prevent and combat trafficking in persons for the purpose of organ removal and trafficking in human organs and

to protect victims and survivors of these crimes by strengthening legislative frameworks, enforcing clinical protocols for the psychosocial evaluation of prospective living donors, engaging health care professionals, governments and other stakeholders in reporting suspected or confirmed cases of trafficking to law enforcement agencies, promoting international cooperation,¹² and collecting data and conducting research on the trends in both crimes;¹³

- (12) to promote research and innovation to maximize the use and optimize the outcomes of transplantation of human cells, tissues and organs, as well as to enable development of alternative therapies to those based on the clinical use of human cells, tissues and organs;
- (13) to implement regulatory frameworks applicable to innovative therapies developed from substantially manipulated cells, tissues and organs that ensure the protection of donors and recipients, and that pursue equity in access to these novel therapies and sustainable health care systems;
- (14) to participate in consultations organized by WHO to develop a global strategy on donation and transplantation;
- (15) to consider providing appropriate support to WHO in implementing this resolution;

2. REQUESTS the Director-General:

- (1) to provide Member States, upon request, with technical assistance for developing national legislation and regulations aligned with the WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation, assessing transplantation needs, establishing or strengthening national authorities, improving capacities to increase the availability of cells, tissues and organs, and implementing ethical, effective and safe transplant programmes;
- (2) to assist Member States, upon request, to strengthen their regulatory capacity to effectively

¹² World Medical Assembly statement on measures for the prevention and fight against transplant-related crimes. Seventy-first World Medical Assembly General Assembly. Cordoba; 2020 (<https://www.wma.net/policies-post/wma-statement-on-measures-for-the-prevention-and-fight-against-transplant-related-crimes/#:~:text=The%20WMA%20emphasises%20the%20responsibility,assisting%20international%20organisations%2C%20medical%20associations,> accessed 26 December 2023).

¹³ The Global Report on Trafficking in Persons prepared by the United Nations Office on Drugs and Crime, in accordance with the provisions set out in United Nations General Assembly resolution 70/179 (2015).

oversee donation and transplantation practices, including through monitoring and evaluating transplantation programme performance and donor and recipient outcomes;

- (3) to continue collecting, analysing and making available to Member States global data on the legislation, regulations, practices, safety, quality, effectiveness, epidemiology and ethics of donation and transplantation of human cells, tissues and organs;
- (4) to revise the WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation to incorporate additional principles that address new ethical challenges posed by scientific advancements in the field, in particular principles to safeguard the intrinsic value of novel products and treatments that are developed from human cells, tissues and organs;
- (5) to continue and strengthen cooperation with United Nations agencies, including the United Nations Office on Drugs and Crime, inter-agency mechanisms, Member State ministries and other relevant stakeholders to improve country, regional and global capacity to respond to identified cases of trafficking in persons for the purpose of organ removal and of trafficking in human organs;
- (6) to provide, in cooperation with key international professional associations and other relevant stakeholders, reference guidance to Member States on the diagnosis of death by neurological and by circulatory criteria;
- (7) to develop, in consultation with Member States, nongovernmental organizations and other relevant stakeholders in accordance with the Framework of Engagement with Non-State Actors and within existing resources, a global strategy

on donation and transplantation, for consideration by the Seventy-ninth World Health Assembly, through the Executive Board at its 158th session, that supports Member States to integrate donation and transplantation into health care systems and promotes the implementation of the WHO Guiding Principles on Human Cell, Tissue and Organ Transplantation;

- (8) to further explore, as part of the global strategy referred to in operative paragraph 2(7), and in accordance with the current framework for world health days, the feasibility and potential impact of establishing a World Donor Day to raise public awareness and enhance understanding on the need for altruistic donation of human cells, tissues and organs and propel global action by Member States to structure appropriate donation and transplantation systems, taking into consideration the existence of other relevant events either observed by WHO or established by other international entities;
- (9) to establish an expert committee in accordance with the Regulations for Expert Advisory Panels and Committees,¹⁴ to assist the Secretariat in developing the proposed global strategy on donation and transplantation and support its implementation;
- (10) to provide a consolidated report on progress in the implementation of this resolution in 2026 to the Seventy-ninth World Health Assembly, through the Executive Board at its 158th session, as well as on progress in the implementation of resolution WHA63.22 on human organ and tissue transplantation.

Eighth plenary meeting, 1 June 2024
A/77/VR/8

TOWARDS GLOBAL CONVERGENCE IN TRANSPLANTATION: SUFFICIENCY, TRANSPARENCY & OVERSIGHT

09-10/NOV/2023
High Level Meeting

SANTANDER STATEMENT

On 9 and 10 November 2023, the Organización Nacional de Trasplantes (ONT), under the Spanish Presidency of the Council of the European Union, convened in Santander a Global Summit entitled “Towards Global Convergence in Transplantation: Sufficiency, Transparency and Oversight”. The Summit was co-organised by the European Directorate for the Quality of Medicines and Healthcare (EDQM) of the Council of Europe, the European Society for Organ Transplantation (ESOT), and The Transplantation Society (TTS). The Summit was co-sponsored by the World Health Organization (WHO) and supported by the International Society of Nephrology (ISN).

The Summit’s objective was to pave the way for global action in transplantation for the next decade. In particular, the Summit aimed to critically review the current state of donation and transplantation of organs, tissues, and cells, identify key challenges, and shape the future direction of transplant activities worldwide to ensure that advances in this field benefit citizens across the globe.

The Summit, attended by 183 participants from 57 countries, international organisations and professional associations, concluded with the following set of recommendations targeted to national and regional governments, though acknowledging the role of other key stakeholders, including health authorities, relevant professional associations, healthcare professionals and institutions, law enforcement agencies, academic and research institutions, and civil society organisations. The Summit also called upon international organisations, in particular the European Union, the Council of Europe, and the WHO, to provide guidance and support States in taking effective measures to implement these recommendations to ensure that no one is left behind.

TOWARDS GLOBAL CONVERGENCE IN TRANSPLANTATION: SUFFICIENCY, TRANSPARENCY & OVERSIGHT

09-10/NOV/2023
High Level Meeting

RECOMMENDATIONS

Participants in the Global Convergence in Transplantation Summit urge governments to:

1. Improve patient care by

- implementing preventive strategies to reduce the burden of diseases that give rise to the need for transplantation;
- integrating donation and transplantation of organs, tissues, and cells into their healthcare systems, taking into account the resources available to address the population's health needs;
- prioritising transplant therapy when that is the most cost-beneficial treatment modality for patients;
- incorporating opportunities for donation of organs, tissues and cells into end-of-life care;
- working towards a unified concept of death, recognising that death can be defined as the permanent cessation of brain functions;
- supporting low-resource countries in developing and strengthening their transplant systems;
- making donation and transplant programs resilient by establishing emergency preparedness plans designed to ensure a timely and effective response to transplant needs in the event of crisis;
- identifying and relieving inequities in access to donation and transplantation and to Substances of Human Origin (SoHO)-based therapies.

2. Make progress towards sufficiency in transplantation by

- developing and expanding deceased donation to its maximum therapeutic potential, including donation after both the neurological and the circulatory determination of death;
- developing living donation programs, preferably as supplements to deceased donation, that ensure informed consent, optimal care of, and long-term follow-up for donors;
- removing financial disincentives for living and deceased donation, while prohibiting financial incentives, in order to ensure that donation is a financially neutral act.

TOWARDS GLOBAL CONVERGENCE IN TRANSPLANTATION: SUFFICIENCY, TRANSPARENCY & OVERSIGHT

09-10/NOV/2023
High Level Meeting

RECOMMENDATIONS

3. Ensure transparency and oversight of practices by

- designating health authorities at the national or regional level that are responsible for the authorisation and monitoring of donation and transplant activities;
- mandating the reporting of data on every donation and transplant procedure, as well as demographic, clinical, and outcome data of recipients and living donors to a registry established or recognized by the relevant health authority;
- establishing a biovigilance system and ensuring the traceability of organs, tissues, and cells from donors to recipients and vice versa;
- supporting data sharing, including by health authorities with relevant international bodies and registries, with due regard for the protection of patients' and donors' privacy.

4. Strengthen the prevention of human trafficking for the removal of SoHO and trafficking in SoHO by

- ensuring appropriate psychosocial evaluation of all prospective living donors;
- establishing a mechanism for the mandatory reporting of suspected or confirmed cases of trafficking, while respecting professional obligations towards patients and maintaining a human rights-based approach focusing on early identification and appropriate protection of victims;
- criminalising and prosecuting all illicit transplant-related activities within their jurisdiction, including by establishing extraterritorial jurisdiction over such activities of their residents in other countries;
- strengthening national and international cooperation in combatting transplant-related crimes.

5. Foster responsible innovation for the clinical use of SoHO by

- actively supporting and funding efforts to overcome the research and economic challenges in developing sustainable innovation;
- mandating the demonstration of quality, safety, and effectiveness of SoHO-based therapies before permitting them to be incorporated into healthcare systems;
- reinforcing the capacity of donation and transplant systems to oversee ethical conduct and clinical translation of research;
- ensuring that human organs, tissues and cells do not become marketable products and that necessary fees for services relating to SoHO and benefits from SoHO-derived products are proportionate and consistent with the altruistic nature of donation;
- ensuring transparency in costs, pricing, and profits from all SoHO-based therapies, and making such therapies affordable to patients;
- promoting social responsibility in public-private collaboration in the development of SoHO-based therapies.
